Task 2: JavaScript Mini Project – Advanced To-Do List App

Objective:
To build a mini interactive web application using JavaScript and DOM manipulation for managing daily tasks efficiently.

Technologies Used:
HTML, CSS, JavaScript (DOM Manipulation, Local Storage)

Features:

- Add new tasks
- Edit existing tasks
- Delete tasks
- Mark tasks as completed
- Search/filter tasks
- Task priority (High / Medium / Low)
- Date & time display
- Task counter (Total & Completed)
- Dark mode toggle
- Clear all tasks
- Data stored using localStorage

Project Description:

The Advanced To-Do List App is a dynamic web application that allows users to organize and manage their daily tasks. Users can add, edit, delete, and mark tasks as completed. The application also includes advanced features such as search functionality, priority-based task highlighting, dark mode, and persistent data storage using localStorage.
